IHR Strengthening Project Theory of Change

Inputs

Activities

Outputs

Outcomes

ODA funding (£28mil)

Central, country and technical staff expertise and time

Regional and bi-lateral partnerships

Project management processes

Technical capacity strengthening including:

Multi-hazard emergency preparedness, resilience and response

Integrated disease surveillance and response

Laboratory systems and public health laboratory networks

Chemical and environmental hazards

One Health coordination and response

Public health workforce and leadership capacity development

Communities of practice and network support to regional public health systems

Evidence generation for effective capacity building

Co-development of public health organisational design

Strengthened technical capability in country and regional public health organisations

Enhanced leadership, workforce and organisational development in partner country and regional public health organisations

Strengthened public health networks at national and regional level

Improved capacity to comply with the IHR (2005) in partner countries and regions

Impact

Increased compliance with IHR (2005) in partner countries

Assumptions

Partner public health organisations co-develop and deliver IHR project activities based on context specific needs
There is ongoing political will and partner absorptive capacity to implement the proposed IHR activities
Improving IHR compliance will strengthen national, regional and global health systems
